## SOIL PIPE VENTILATION – DOUBLE PIPE

### PRODUCT DESCRIPTION

#### *JUAL Soil Pipe Ventilation – double pipe*

#### APPLICATIONS:

The soil pipe ventilation is used for the flashing of soil pipes which penetrate the roof construction and the roofing membrane. Because of its double pipe construction the height is adjustable. The soil pipe ventilation is a systematic and secure solution that provides both a watertight flashing of the roofing membrane and an airtight extension of the soil pipe above the roof. The JUAL Soil Pipe Ventilation comes in versions for installation on roofs with either bitumen or foil membranes.

#### MATERIALS:

Fully welded pipes in stainless steel AISI 316 / EN 1.4401 (SS) or zinc no. 14.  
Flange in stainless steel AISI 304 / EN 1.4301 (SS) or zinc no. 14.

Soil pipes ventilations with stainless steel pipes can be supplied with stainless steel flanges prepared for integration of bitumen membrane on the roof or they can be supplied with bitumen or foil membranes integrated from the factory. Supplied with EPDM O-ring.

Soil pipe ventilation with zinc pipes are supplied with zinc flanges prepared for subsequent integration of bitumen membranes.

Installation and application must be conducted in accordance with current industry standards and compatibility with the roof's membrane must be secured.
